

SINJINI BANERJEE

Cloud Engineer · DevOps | Google Cloud Platform | AWS | Kubernetes

(+91) 86978 81742 | sinjini2145@gmail.com | Ichhapur, West Bengal, India | [linkedin.com/in/sinjini-banerjee](https://www.linkedin.com/in/sinjini-banerjee)

PROFESSIONAL SUMMARY

Cloud Engineer with **2+ years of experience** in DevOps, cloud infrastructure, and CI/CD automation across **GCP** and **AWS**. Hands-on expertise in **Kubernetes (GKE)**, **Terraform/CloudFormation**, **GitLab**, **Jenkins**, and **Cloud Build**. Led incident response for a production security breach, architected zero-public-IP enterprise migrations, and cut infrastructure egress costs by 94%. **Google Cloud certified** - Associate Cloud Engineer, Professional Data Engineer, and Professional Cloud Network Engineer.

TECHNICAL SKILLS

- **DevOps & CI/CD (2+ yrs)**: GitLab, Jenkins, Google Cloud Build, GitHub, GitOps pipeline-only deployments, Blue-Green deployments
- **Cloud Platforms**: GCP (2+ yrs), AWS (2+ yrs) - EC2, EKS, VPC, S3, Lambda, Cloud Functions
- **Infrastructure as Code (2+ yrs)**: Terraform, CloudFormation, Cloud Foundation Fabric, three-state environment backends
- **Containers & Orchestration**: Docker, Kubernetes (GKE), NGINX, Helm, KEDA autoscaling
- **Security & Observability**: Cloud Armor WAF, Security Command Center, IAP, Secret Manager, Cloud Monitoring, VPC Flow Logs, Cloud Audit Logs
- **Languages & Scripting**: Python, Bash/Shell scripting, C, C++, HTML, CSS

PROFESSIONAL EXPERIENCE

Cloud Engineer — D3V Technology Solutions (November 2024 – Present)

- **Incident Response & Secure Rebuild (client WordPress platform)**: Led forensics over IAP of a compromised WordPress VM (cryptominer/botnet payload), documented IoCs, kill-chain and MITRE ATT&CK mapping, sanitized recovered data, and rebuilt the platform - private VM with no public IP, IAP-only SSH, HTTPS load balancer with Google-managed certificate, Secret Manager, default-deny firewall - with DNS cutover to the new load balancer.
- **Incident Response & Security Hardening (Lead)**: Led emergency response to a March 2026 production breach; traced the attacker via Cloud Audit Logs and VPC Flow Logs, revoked public IPs on Cloud SQL, and enforced private-only connectivity.
- **Zero-Trust Access**: Architected cross-project developer access with Identity-Aware Proxy (IAP) tunnels and a hardened Compute Engine bastion, eliminating public internet exposure for database connections.
- **CI/CD Guardrails**: Enforced GitOps pipeline-only cluster deployments (all changes through Cloud Build), stripping direct cluster write access after a staging outage caused by manual kubectl apply with stale state.
- **ERPNext (Frappe) Migration to GCP**: Led migration using a three-state Terraform model with isolated shared/test/prod backends, zero-public-IP architecture (Global Load Balancers, Cloud NAT, IAP), and stateful Spot VMs with independent durable disks.
- **AI Cart & Purchasing Platform (GKE)**: Migrated the engine from Cloud Run to multi-environment GKE clusters; fixed WebSocket session affinity via NGINX consistent-hashing, GCLB cookie affinity, and Downward-API pod-IP injection; built custom NGINX-connection HPA with preStop zero-downtime scale-down.
- **Scalability**: Decoupled monolithic HTTP into an async Pub/Sub + Redis + KEDA worker architecture; designed a geo-distributed MIG proxy fleet (Tinyproxy) with dynamic IP rotation to bypass anti-bot blocks.
- **FinOps & Cost Optimization**: Modeled and optimized ~\$2.9k/month GCP spend; reduced egress payloads from 18MB to 1MB, cutting external egress costs by **94%** (~\$93 to ~\$5.16 per 1,000 runs).
- **Security Assessments (SCC)**: Owned an assessment framework across 10 security pillars; blended SCC Premium detectors with Cloud DLP, Web Security Scanner, and CIS postures into an automated scoring dashboard.
- **Cloud-to-Cloud Migrations**: Executed AWS-to-GCP migrations end-to-end (Lambda to Cloud Functions, S3 to GCS, RDS to Cloud SQL) with automated CI/CD; repaired a production Cloud Build pipeline for WordPress on GKE and restored GitOps deployments.

Associate Cloud Engineer Intern — Nervescape Analytics LLP (May 2024 – October 2024)

- Earned the Google Cloud **Associate Cloud Engineer** certification while applying IAM, networking, compute, and storage to real-world tasks.
- Supported CI/CD setup: build triggers, deployment script troubleshooting, and automation of routine operations.

- Provisioned and monitored Compute Engine, Cloud Storage, and VPC resources; applied least-privilege IAM and firewall rules.

CERTIFICATIONS & BADGES

- **Google Cloud Professional Cloud Network Engineer** - Google Cloud (2024, Credly verified)
- **Google Cloud Professional Data Engineer** - Google Cloud (2024, Credly verified)
- **Google Cloud Associate Cloud Engineer** - Google Cloud (2024, Credly verified)
- **Certified Partner Specialist - Gemini Enterprise Deployment** - Google Cloud (Credly verified)
- **Gemini Enterprise specialization badges:** Agent Platform Governance, Workspace Data Sources & Model Armor, Gemini Enterprise Deployment (Credly verified)
- **Google Cloud Skill Badges:** Set Up an App Dev Environment, Load Balancing on Compute Engine, GCP for AWS Professionals

EDUCATION

Bachelor of Technology in Computer Science & Engineering — Hooghly Engineering & Technology College, Hooghly (2024, CGPA 8.48)

Higher Secondary (12th) — Central Model School, Barrackpore (81.8%)

Secondary (10th) — Kendriya Vidyalaya No.1, Ichhapur (89.3%)
